Experience

Global Virtual Opportunities

May 2025 - Present

Backend and Infrastructure Engineer

San Antonio, Texas

markomax.com • nowlifestyle.com • gotbackup.com • gogvo.com

- Re-architected **MarkoMax** from a basic post composer into a production social-media orchestration platform serving **2,000+ users** on a 3-node Docker Swarm backed by PostgreSQL, Redis, and Ceph.
- Cut per-post AI generation cost by chunking source video and caching fragments by **cosine similarity** over vector embeddings, serving near-duplicate requests from prior renders instead of regenerating.
- Built async media-processing and generation pipelines producing **~10,000 posts/day** with SSE status streaming, **idempotent job handling**, and heartbeat/stale-job detection for automatic recovery after worker failure.
- Built a public **MCP server** plus a Mastra/LangGraph auto-reply system handling **70,000+ social messages/day** across Instagram, Facebook, and LinkedIn comments and DMs.
- Built integration-test infrastructure for a legacy **payments monolith** using Vitest, Testcontainers, and real dependencies; preserved isolation with tmpfs-backed database state and **4 parallel CI forks**; led a team of 4 engineers and ran code reviews and hiring loops.
- Led migration of the payments platform from **PHP 7.4 to PHP 8.4** using characterization/integration tests and gradual rollout; now containerizing the platform and migrating workloads toward Kubernetes.
- Drove infrastructure modernization across **140+ Linux servers**: Ansible IaC, centralized Git configuration, CI-run playbooks, HA load-balancing, Ceph-backed external state, and OpenObserve logging/metrics.
- Designed a 4-attempt SMS dunning sequence for a **15,000-user** affiliate CRM — CTA severity scaled to account-deletion proximity, magic-link payment updates, click-through tracked by attempt, variant, tenure, and region — reducing failed payments from **10.7% to 5.2%**.

Education

University of Texas at San Antonio

Expected 2028

Bachelor of Science in Computer Science

San Antonio, Texas

Northeast Lakeview College

2026

Associate of Science in Computer Science - GPA: 4.0/4.0

- Completed 81+ college credits in one year; **2x President's List**, Phi Theta Kappa member

Projects

SheetX | Google Sheets API, diff3 reconciliation

sheetx.co

- Built a bidirectional synchronization engine for concurrent human/API edits using **stable row identity metadata** and **diff3 reconciliation** to merge conflicting state without silently overwriting changes.
- Designed a **durable, eventually consistent** write pipeline with debouncing and request coalescing; burst writes collapse into batched Google API jobs, while quota-limited jobs re-enqueue until reconciliation completes.

OpenRenderer | C++, OpenGL, CMake, GLSL

github.com/NazariiTsubera/OpenRenderer

- Designed a modular rendering engine with configurable render passes, shader/material abstractions, GPU buffer/texture management, and experimental **ray-marching shaders**.

Circuit X | C++, SFML, ImGui, Eigen

github.com/NazariiTsubera/circuitx

- Built a real-time circuit simulator with a **Backward-Euler differential solver** and **Modified Nodal Analysis** pipeline converting drawn schematics into solvable node trees.

Technical Skills

Programming: C++, TypeScript, JavaScript, PHP, SQL, Python, Java **Backend & Systems:** NestJS, Symphony, Laravel, Linux, Docker, Kubernetes, Ansible, AWS, GitLab CI/CD

Data & Infrastructure: PostgreSQL, MySQL, Redis, Ceph/S3, Kafka, gRPC, BullMQ, Nginx, OpenObserve

Testing & AI: Vitest, Testcontainers, Playwright, LangGraph, Mastra, MCP, vector embeddings
